

Moving:

An exploration of how far we go for work.

Solomon Bisker

Special Topics in Interactive Art and Computational Design, Spring 2010

(Golan Levin's Studio)

Solomon Bisker

100 Memorial Dr. 11-1B Cambridge, MA 02142
sbisker@alum.mit.edu
Portfolio at www.biskerrific.com

Objective

To create engaging and inspiring experiences with a blend of computer science, interaction design and user research

Education

*Massachusetts Institute of Technology, Cambridge, MA
Masters of Engineering, Computer Science and Engineering
(Course VI)....February 2008*

Thesis: Mobile Experience Laboratory,
MIT Design Laboratory - Advisor, Dr. Federico Casalegno
["Applications of Mobile Barcode Recognition to Real-time
Events and Gatherings"](#)

*Bachelors of Science, Computer Science and Engineering
(Course VI-III)....June 2006*

Williamsville East High School, Buffalo, NY

Human-Computer Interaction (HCI) Electives

At MIT: Design Without Boundaries, Pervasive Computing,
New Paradigms in HCI, User Interface Design and
Implementation

At Harvard Extension: Analog Electronics Lab (Fall 08)

Work History

Software Interaction Designer....Cambridge Systematics
Cambridge, MA, March 2008-February 2009

- Designer for small software consulting team serving the federal and state transportation industry
- Responsible for design sketching, prototyping, usability testing and user research
- Additionally served as front-end engineer, building Javascript and Flex prototypes and proofs of concept

Research Assistant....MIT Mobile Experience Lab/Design Lab
Cambridge, MA, 2007-2008

- Designed and built mobile and web technology to explore innovative applications connecting people with their physical environments.
- Helped run MAS.551, Design Without Boundaries, a studio using technology to educate youth on sustainable living
- Built lab website and maintained lab computer systems

Teaching Assistant....MIT Civil and Env. Engineering
Cambridge, MA 2006-2007

- Developed course materials for 1.204, a algorithms class for non-CS majors
- Co-recitation instructor for 1.264, a database and web development class for non-CS majors.

Resume: Statement of corporate conformity?...

The most popular reason for moving is a change of job (according to Ryder.)
What do the worlds' attempts at getting hired tell us about who we are
– and where our lives take us?

Solomon Bisker

```

getresumeurls.py
1:0 <No selected symbol>
#Google API is totally lame and restricts us to 64 resumes per query.
#We get around this by augmenting the search query on each iteration, and
#(perhaps?) using MD5 file sums later to check for duplicates

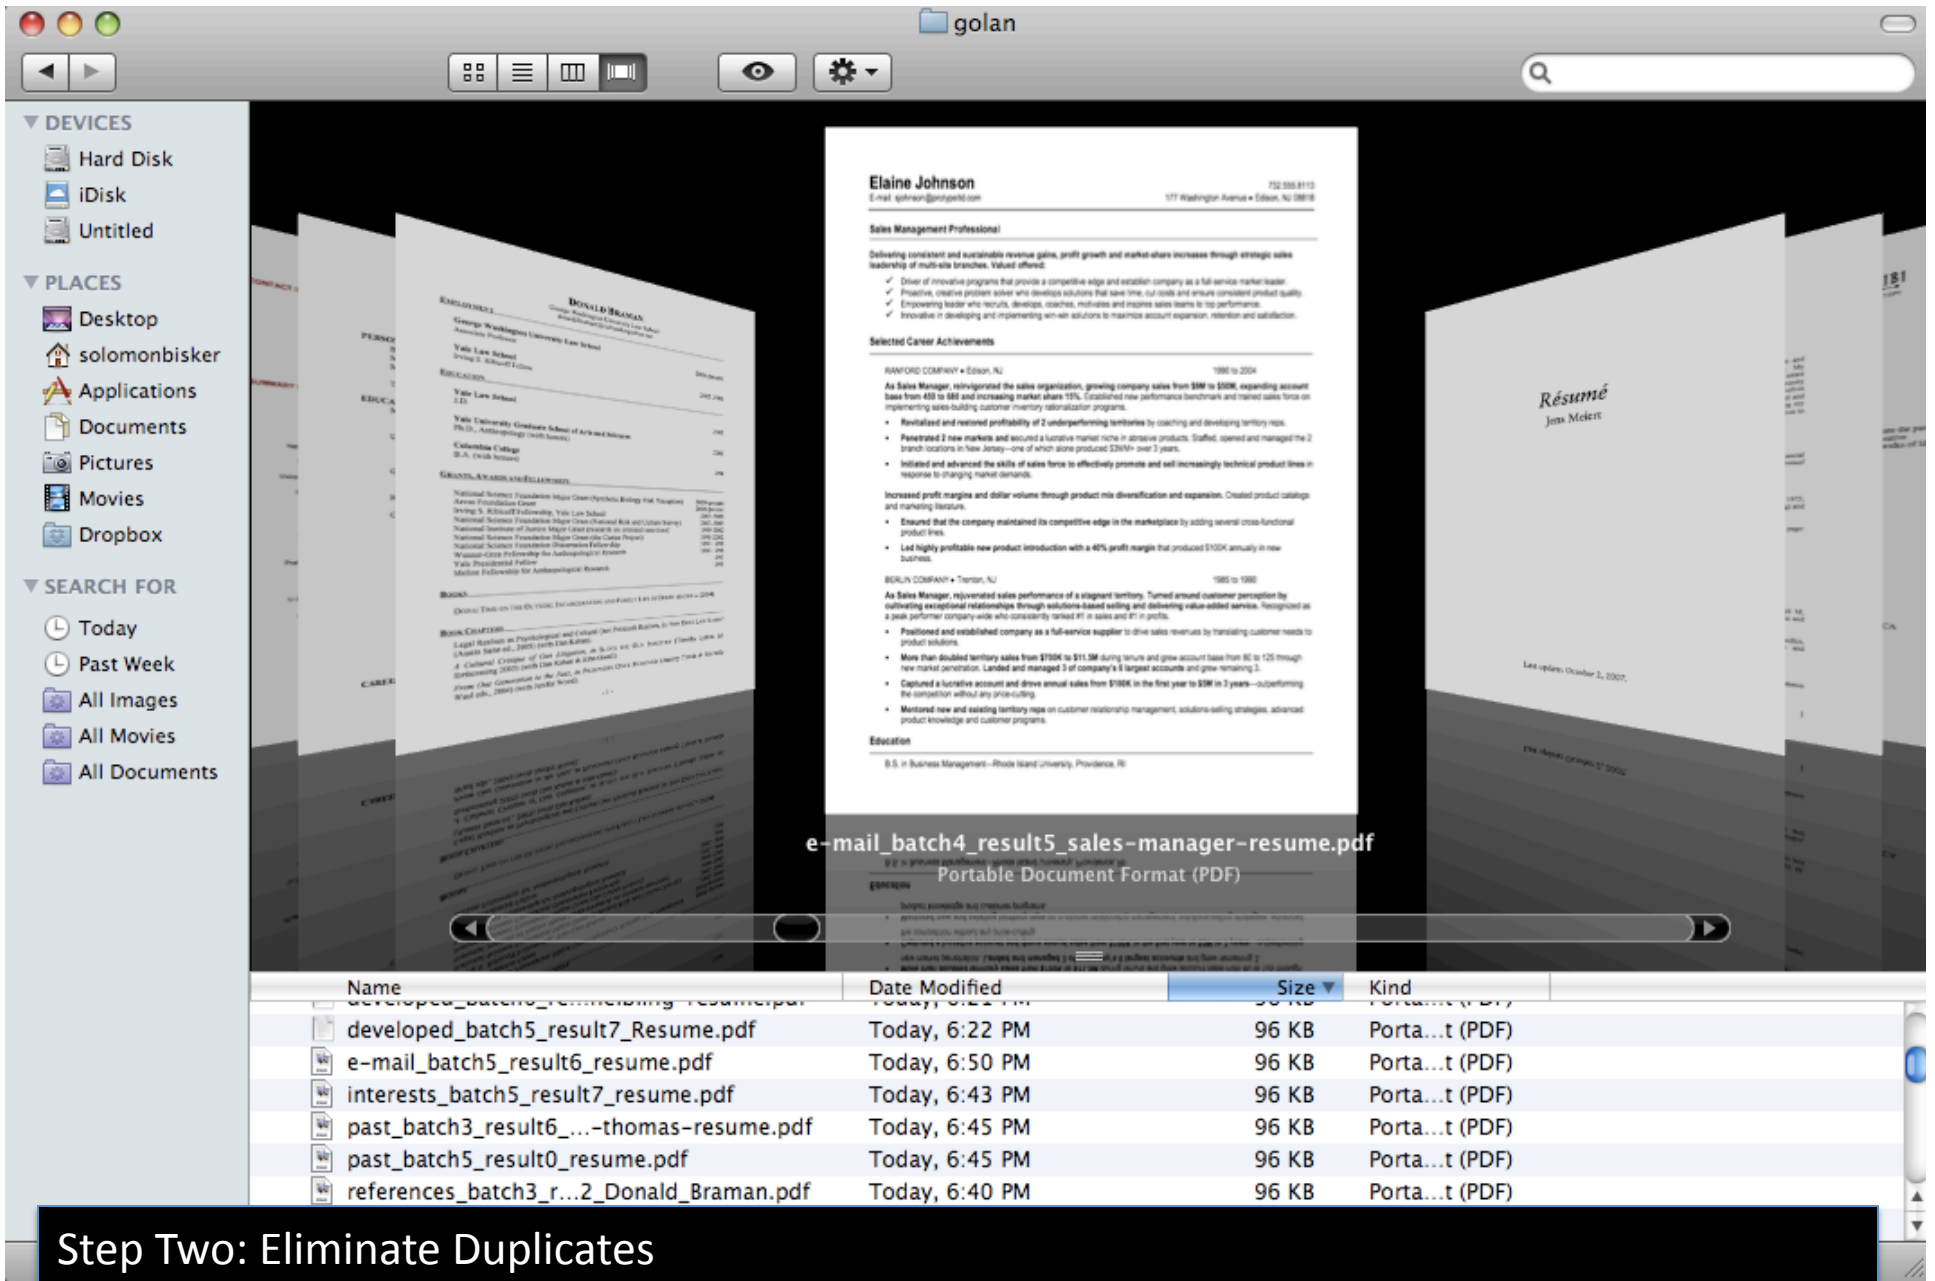

#For geographic uniformity, we could go by states
#states = ["AK"]
# , "AL", "AR", "AZ", "CA", "CO", "CT", "DC", "DE", "FL", "GA", "HI", "IA",
"ID", "IL", "IN", "KS", "KY", "LA", "MA", "ME", "MD", "MI", "MN", "MO", "MS",
"MT", "NC", "ND", "NE", "NH", "NJ", "NM", "NV", "NY", "OH", "OK", "OR", "PA",
"RI", "SC", "SD", "TN", "TX", "UT", "VT", "VA", "WA", "WI", "WV", "WY"]

#Cliched resume phrases. These are used to avoid skewing geographic
distribution.
#This list should include CareerBuilder common search terms, but shouldn't be
biased towards
#"lame" resumes.
#cliche = ["\responsible for\"", "\developed\""]
#cliche = ["\led\"", "\education\"", "\objective\"", "\available upon request
\"", "\related coursework\"", "\work experience\"", "\employment history\"",
"\experience\"", "\delegated\"", "\address\"", "\team\"", "\references\"",
"\work history\"", "\project\"", "\interests\"", "\volunteer\"", "\work\"",
"\past\"", "\history\"", "\reference\"", "\phone\"", "\e-mail\"", "\skills
\""]

for q in range(len(cliche)):
    for i in range(0, 19):

```

Step One: Collect Resumes
Python script uses the Google and Bing APIs to find and download resumes, using the query "filetype:pdf resume.pdf". "Buzzwords" salt searches to drum up additional unique results.

Step Two: Eliminate Duplicates

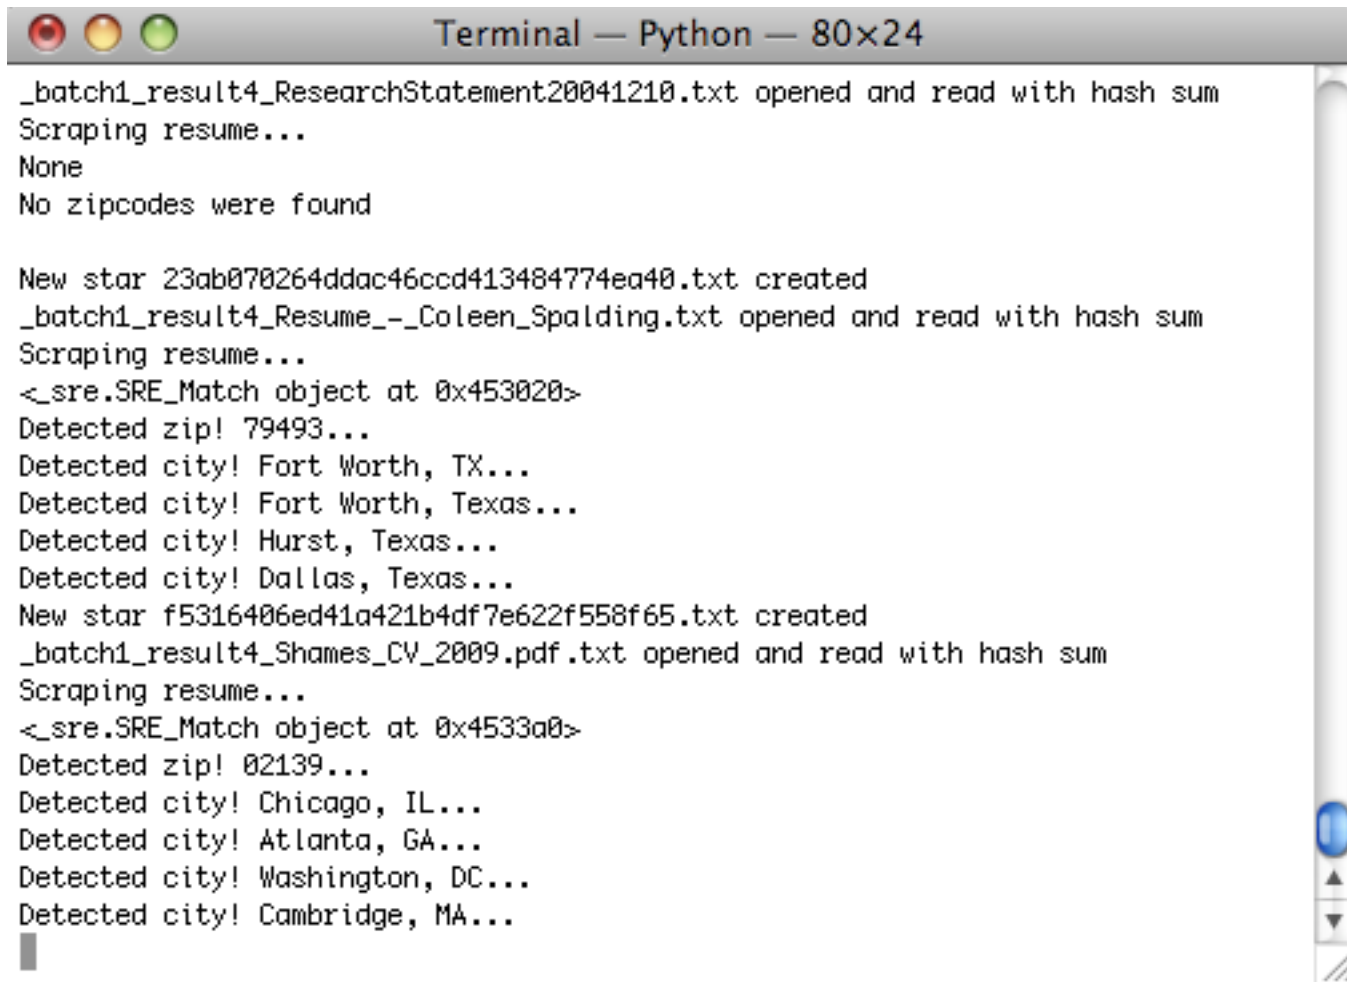

Duplicates of resumes are found and deleted using an open-source Python script, Duplinator. Coverflow confirms results and, optionally, lets us look for false positive “Sample Resumes.”

The screenshot shows an Automator workflow window titled "resumetotext". The interface includes a top bar with window controls and "Record", "Stop", and "Run" buttons. On the left, there is a "Library" pane with categories like "Files & Folders" and "Text". The main workspace contains three actions:

- Ask for Finder Items:** Prompt: "Choose a Finder Item:", Start at: "Desktop", Type: "Folders", and an unchecked "Allow Multiple Selection" checkbox.
- Get Folder Contents:** An unchecked checkbox for "Repeat for each subfolder found".
- Extract PDF Text:** Output: "Plain Text" (selected), "Add Page Header" and "Add Page Footer" checkboxes with "##Page" placeholders, "Save Output to:" "Desktop", "Output File Name" section with "Same as Input Name" selected and "Custom Name" set to "Extract Text Output", and an unchecked "Replace Existing Files" checkbox.

Below the actions, a description for "Ask for Finder Items" is provided: "This action lets the user choose Finder items in a dialog when the workflow is run." Below that, the input is listed as "Input: Files/Folders".

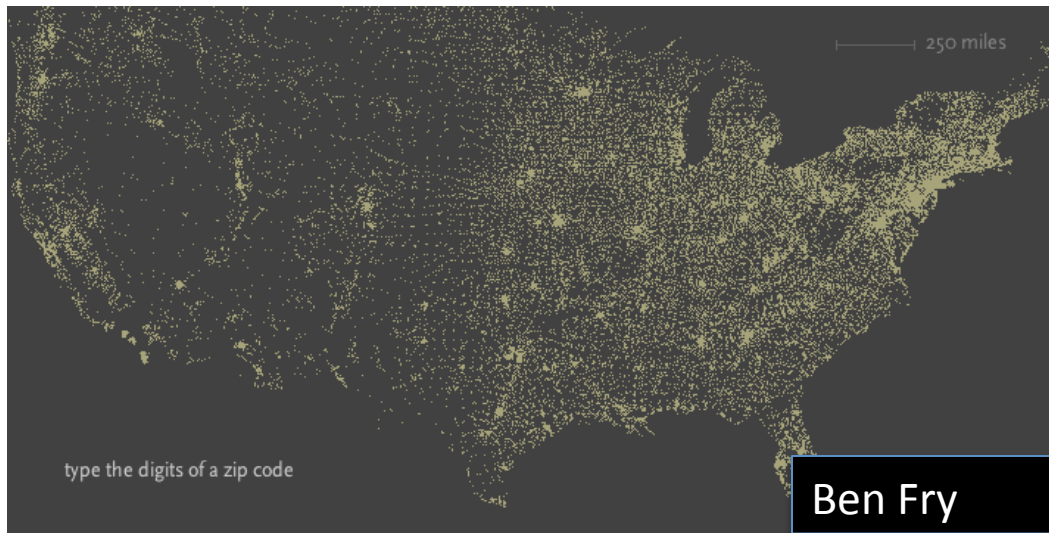

Step Three: Convert PDFs to TXT format.
On Macs, this is done with Apple's Automator workflow tool.

A terminal window titled "Terminal — Python — 80x24" showing the execution of a Python script. The script processes two resumes. The first resume, "_batch1_result4_ResearchStatement20041210.txt", is read and processed, resulting in "None" and "No zipcodes were found". The second resume, "_batch1_result4_Resume_-_Coleen_Spalding.txt", is read and processed, resulting in a list of detected zipcodes and cities: 79493, Fort Worth, TX, Fort Worth, Texas, Hurst, Texas, and Dallas, Texas. A new star file is created for this resume. The third resume, "_batch1_result4_Shames_CV_2009.pdf.txt", is read and processed, resulting in a list of detected zipcodes and cities: 02139, Chicago, IL, Atlanta, GA, Washington, DC, and Cambridge, MA. A new star file is created for this resume.

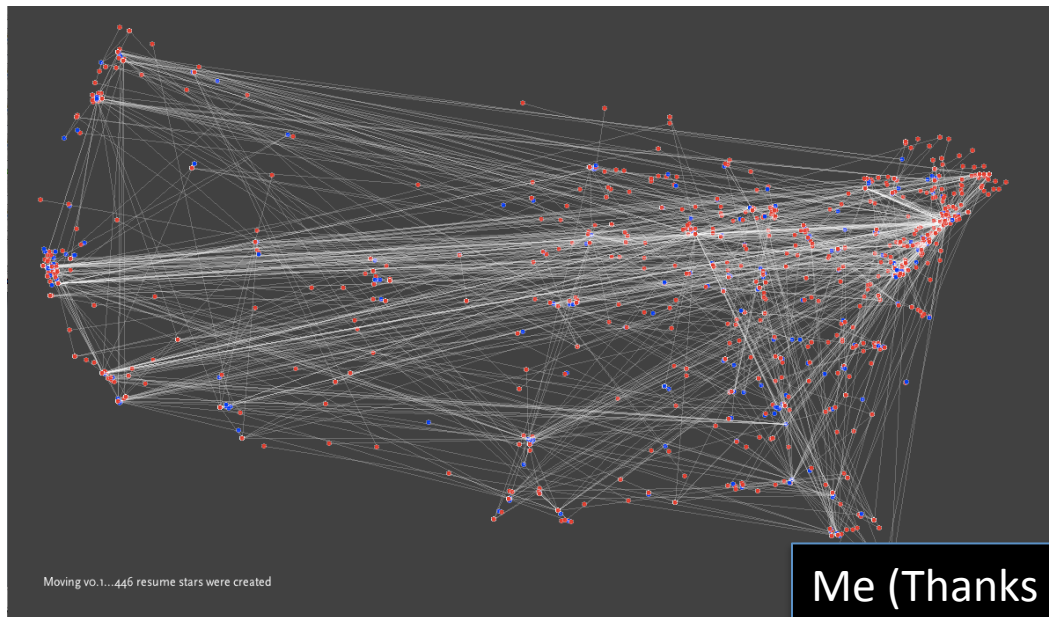

```
_batch1_result4_ResearchStatement20041210.txt opened and read with hash sum
Scraping resume...
None
No zipcodes were found

New star 23ab070264ddac46ccd413484774ea40.txt created
_batch1_result4_Resume_-_Coleen_Spalding.txt opened and read with hash sum
Scraping resume...
<sre.SRE_Match object at 0x453020>
Detected zip! 79493...
Detected city! Fort Worth, TX...
Detected city! Fort Worth, Texas...
Detected city! Hurst, Texas...
Detected city! Dallas, Texas...
New star f5316406ed41a421b4df7e622f558f65.txt created
_batch1_result4_Shames_CV_2009.pdf.txt opened and read with hash sum
Scraping resume...
<sre.SRE_Match object at 0x4533a0>
Detected zip! 02139...
Detected city! Chicago, IL...
Detected city! Atlanta, GA...
Detected city! Washington, DC...
Detected city! Cambridge, MA...
```

Step Four: Extract location information from each resume into its own file. With Python, read in Ben Fry's "Zip Decode" zip-to-city-name mapping to determine valid US cities and valid US zipcodes. We'll use his project again later.

Ben Fry

Me (Thanks to Ben Fry)

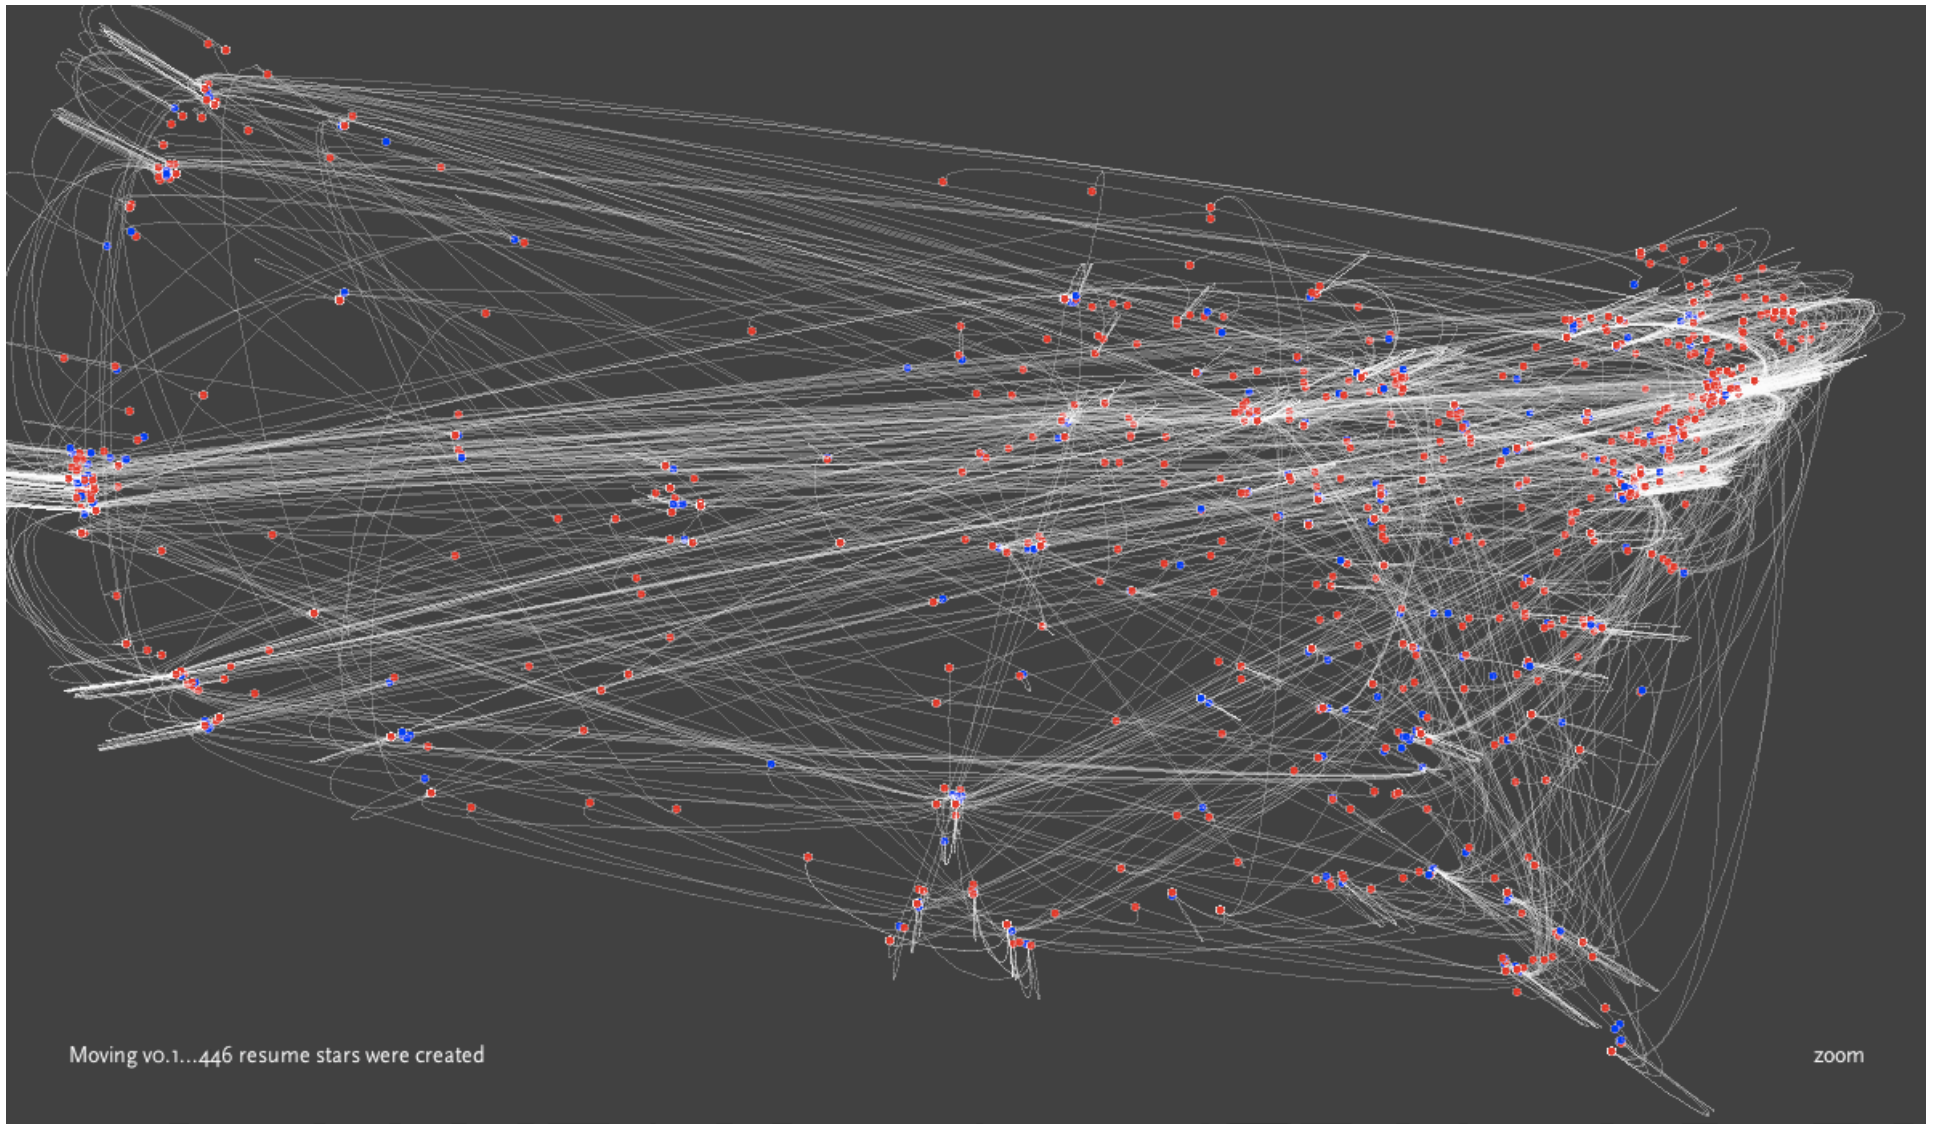

Step Five: Plot location information in Processing
Much of the visualization code came from reverse-engineering Ben Fry's "Zip Decode", letting us plot both cities and zipcodes easily, and adding a Resume object model.

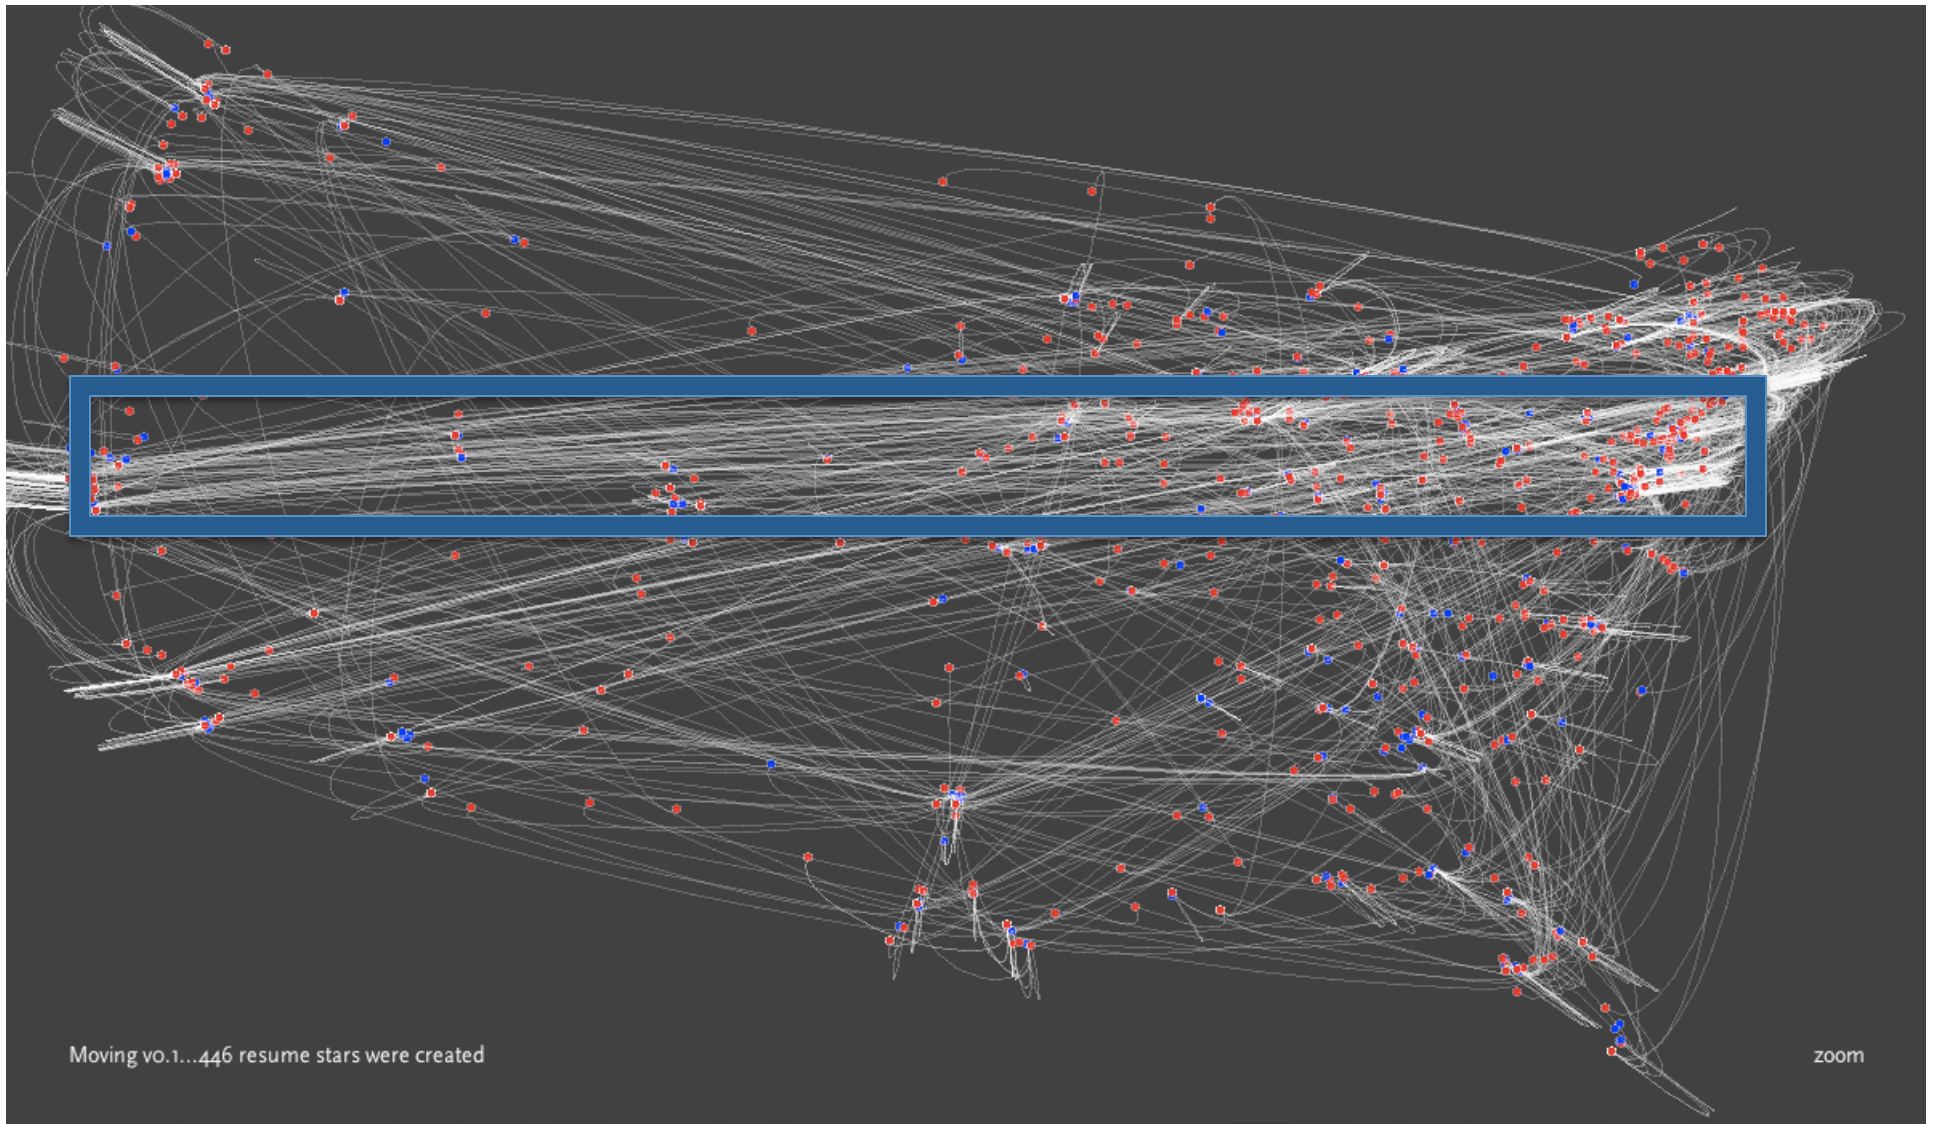

~1,600 Resumes

~600 Uniques

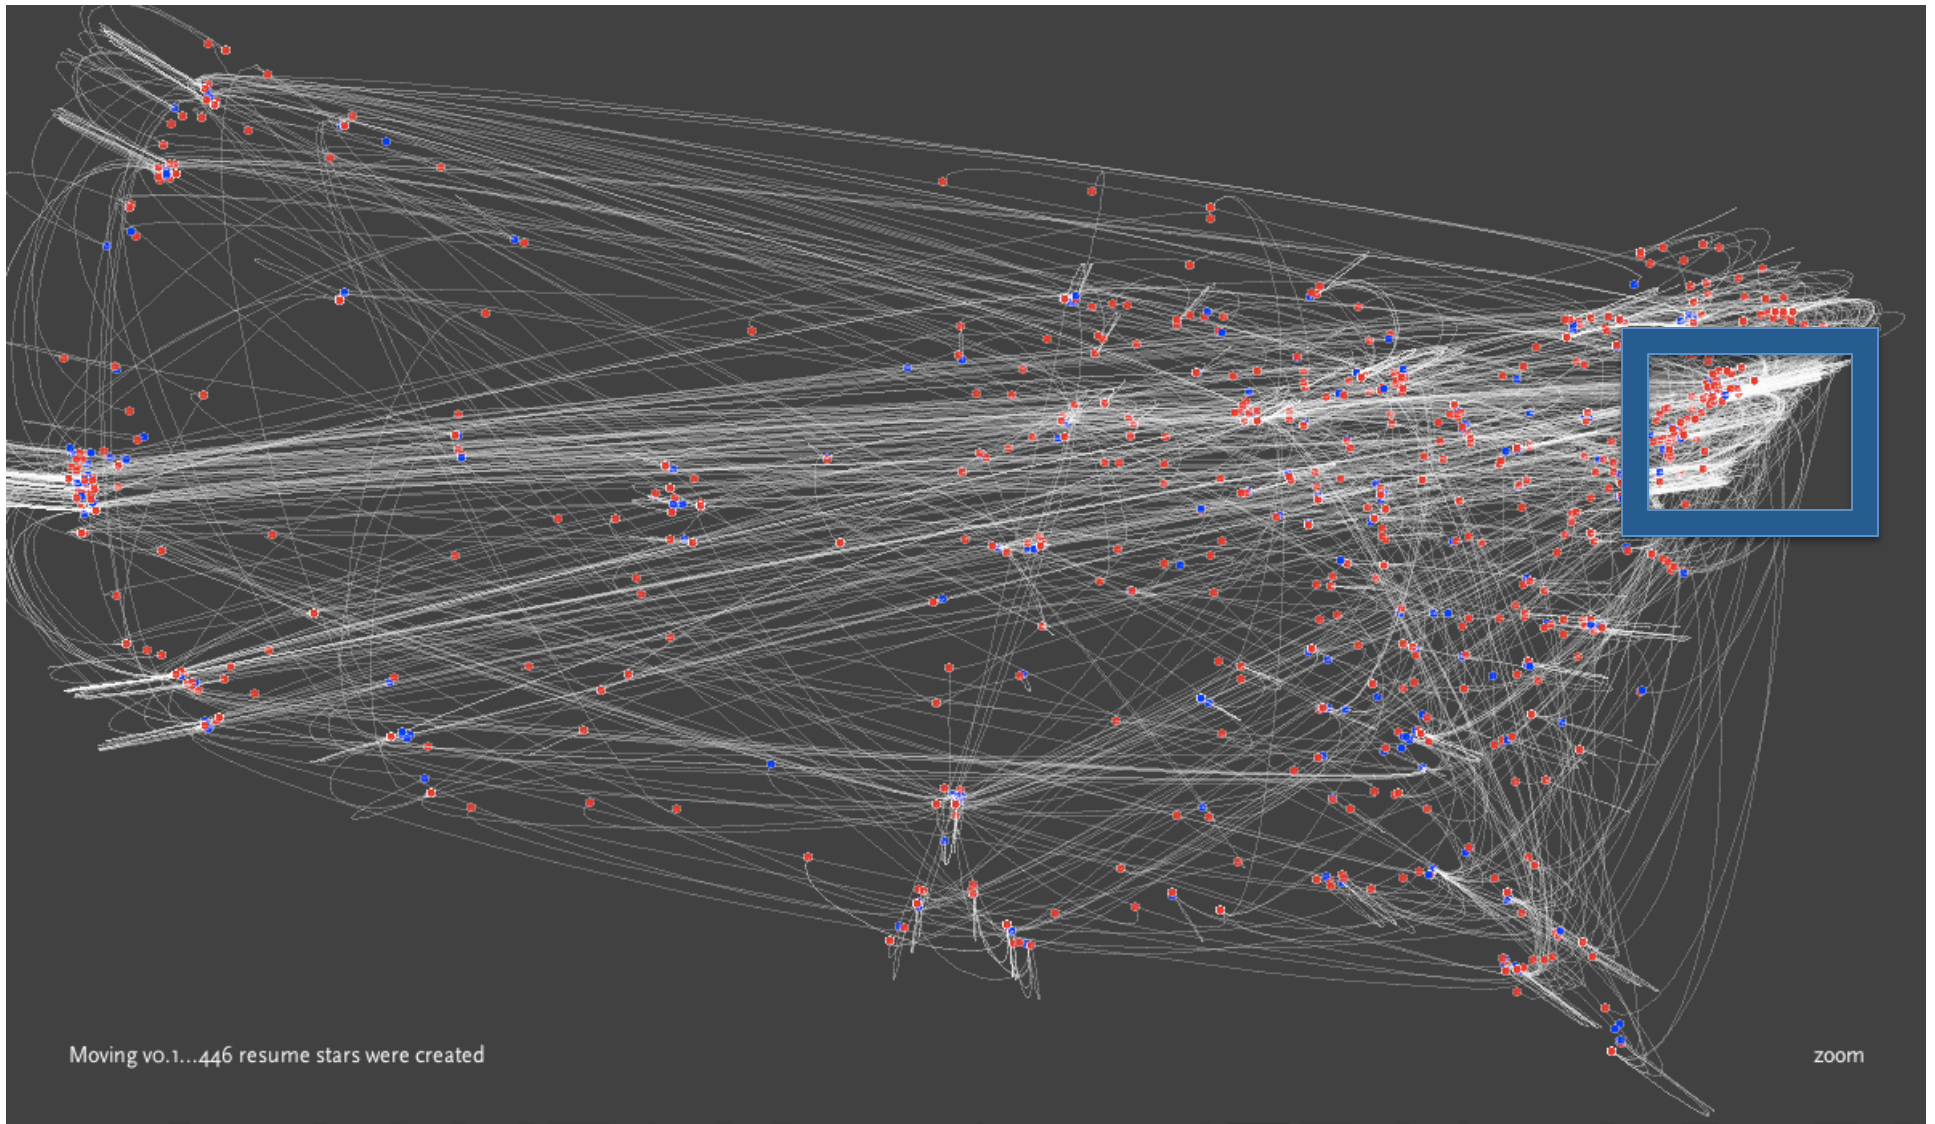

~450 With Complete Location information (Number Plotted)

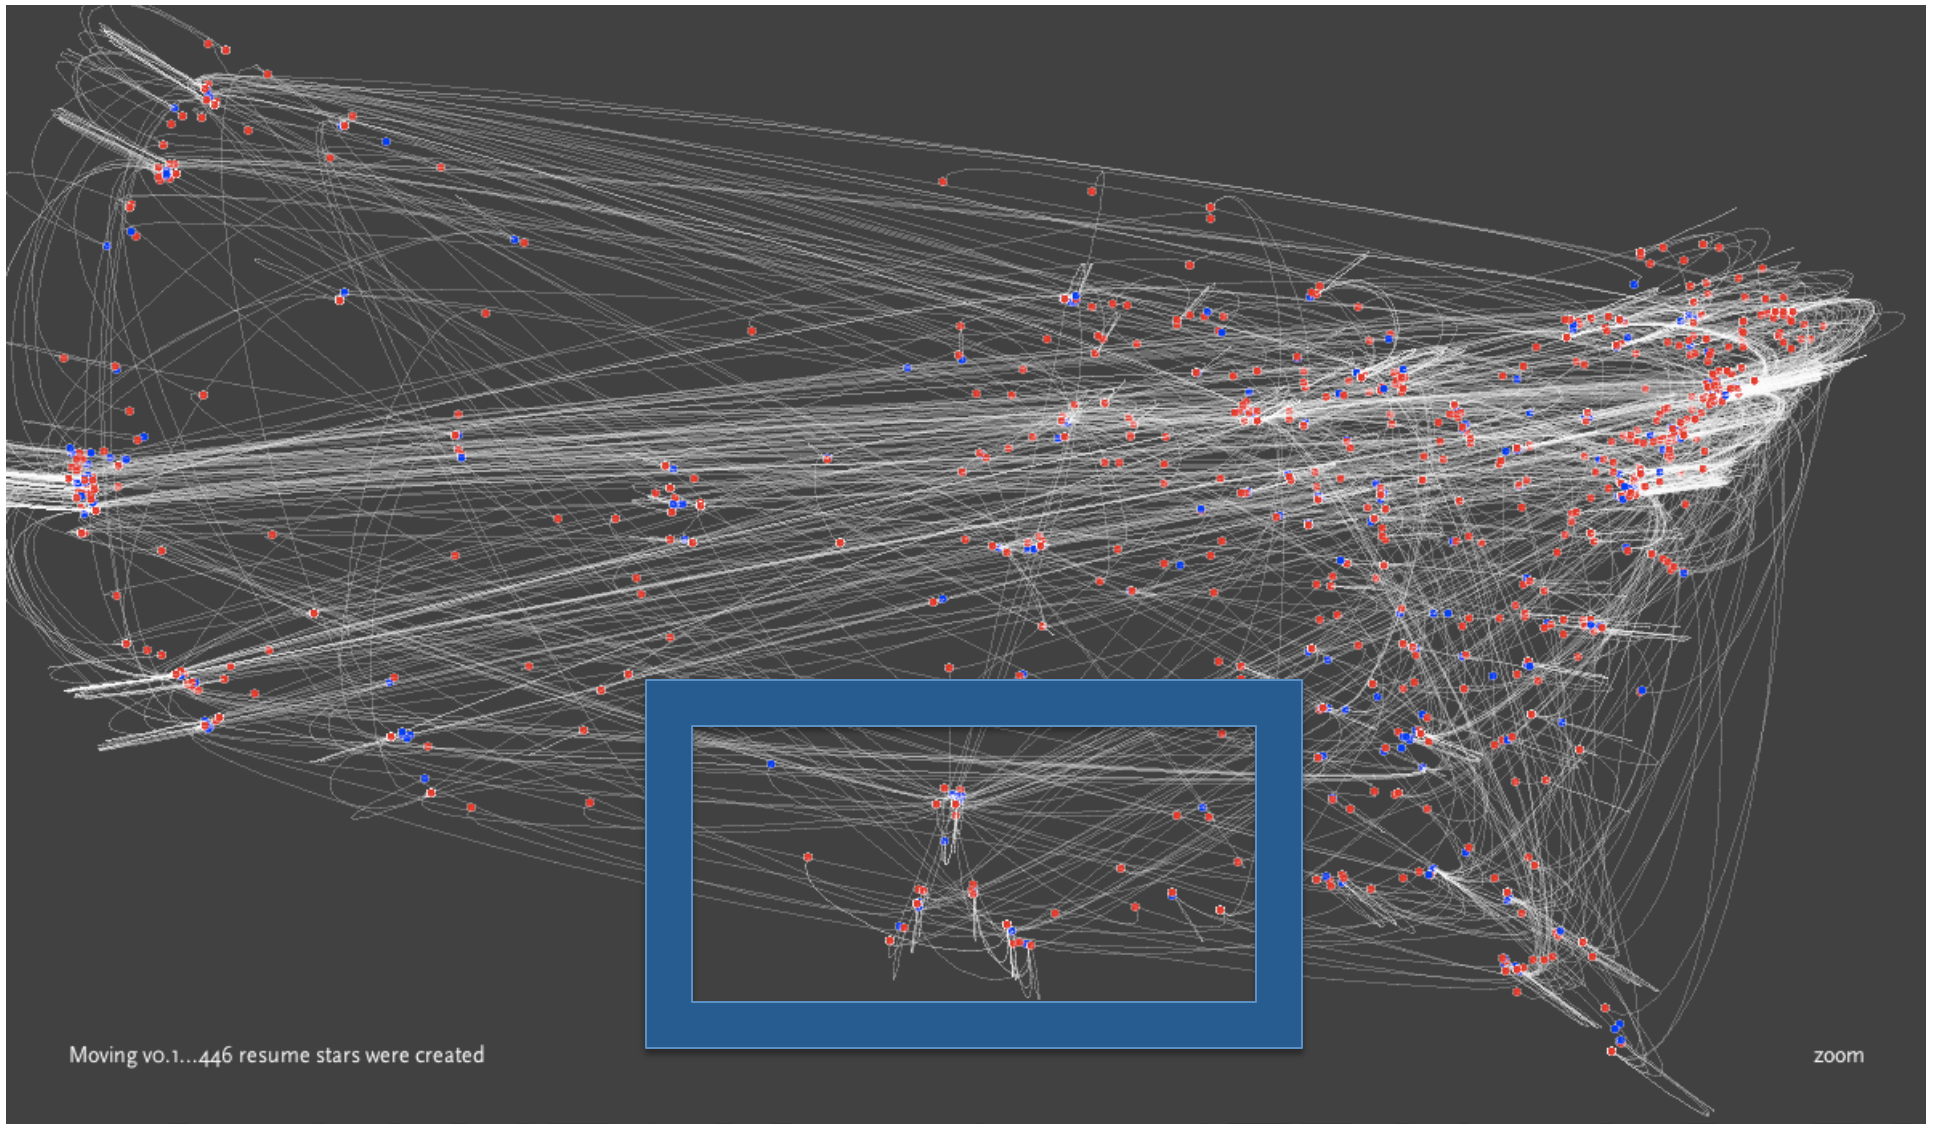

Finding: There seem to be vastly more jobs (red dots) than home cities (blue dots).

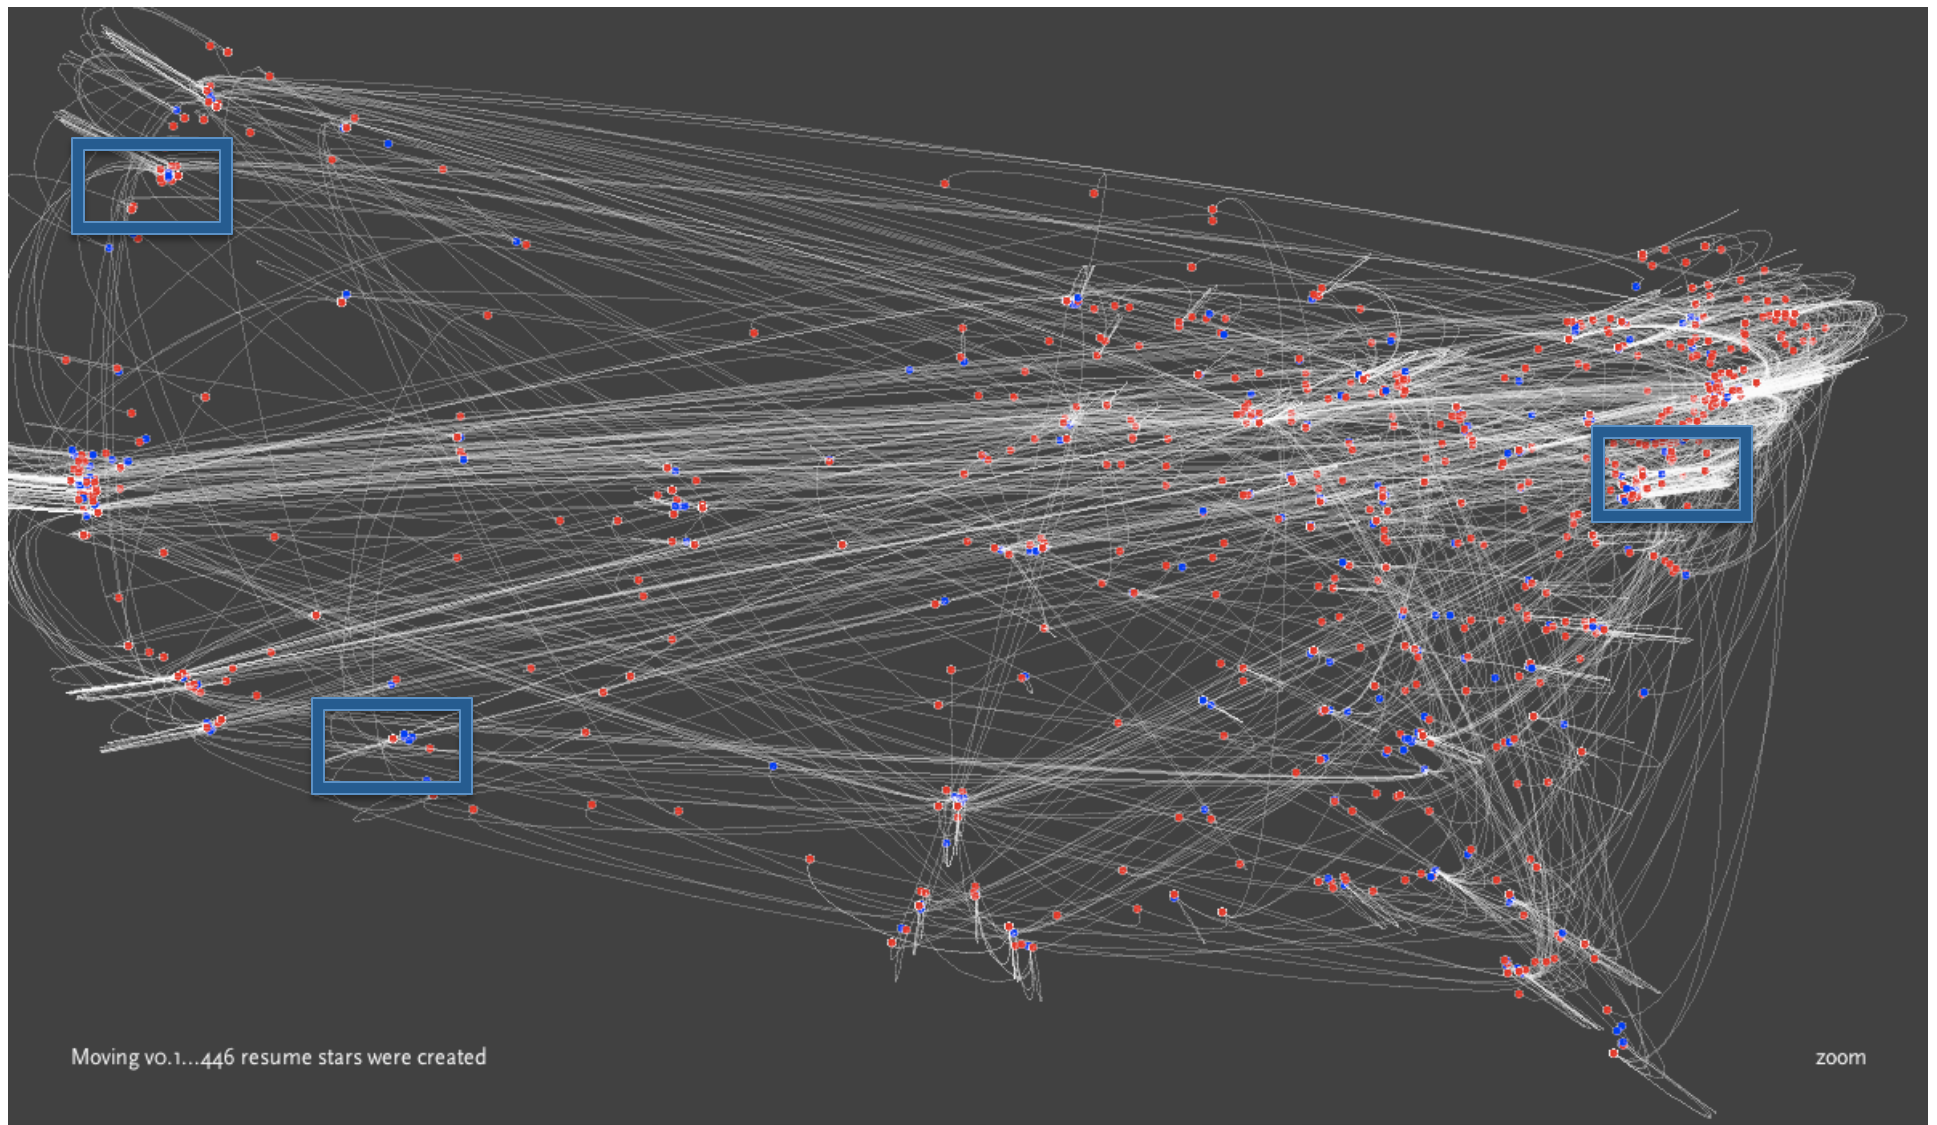

Finding: Lots of people jump coasts for work (especially to and from San Francisco)

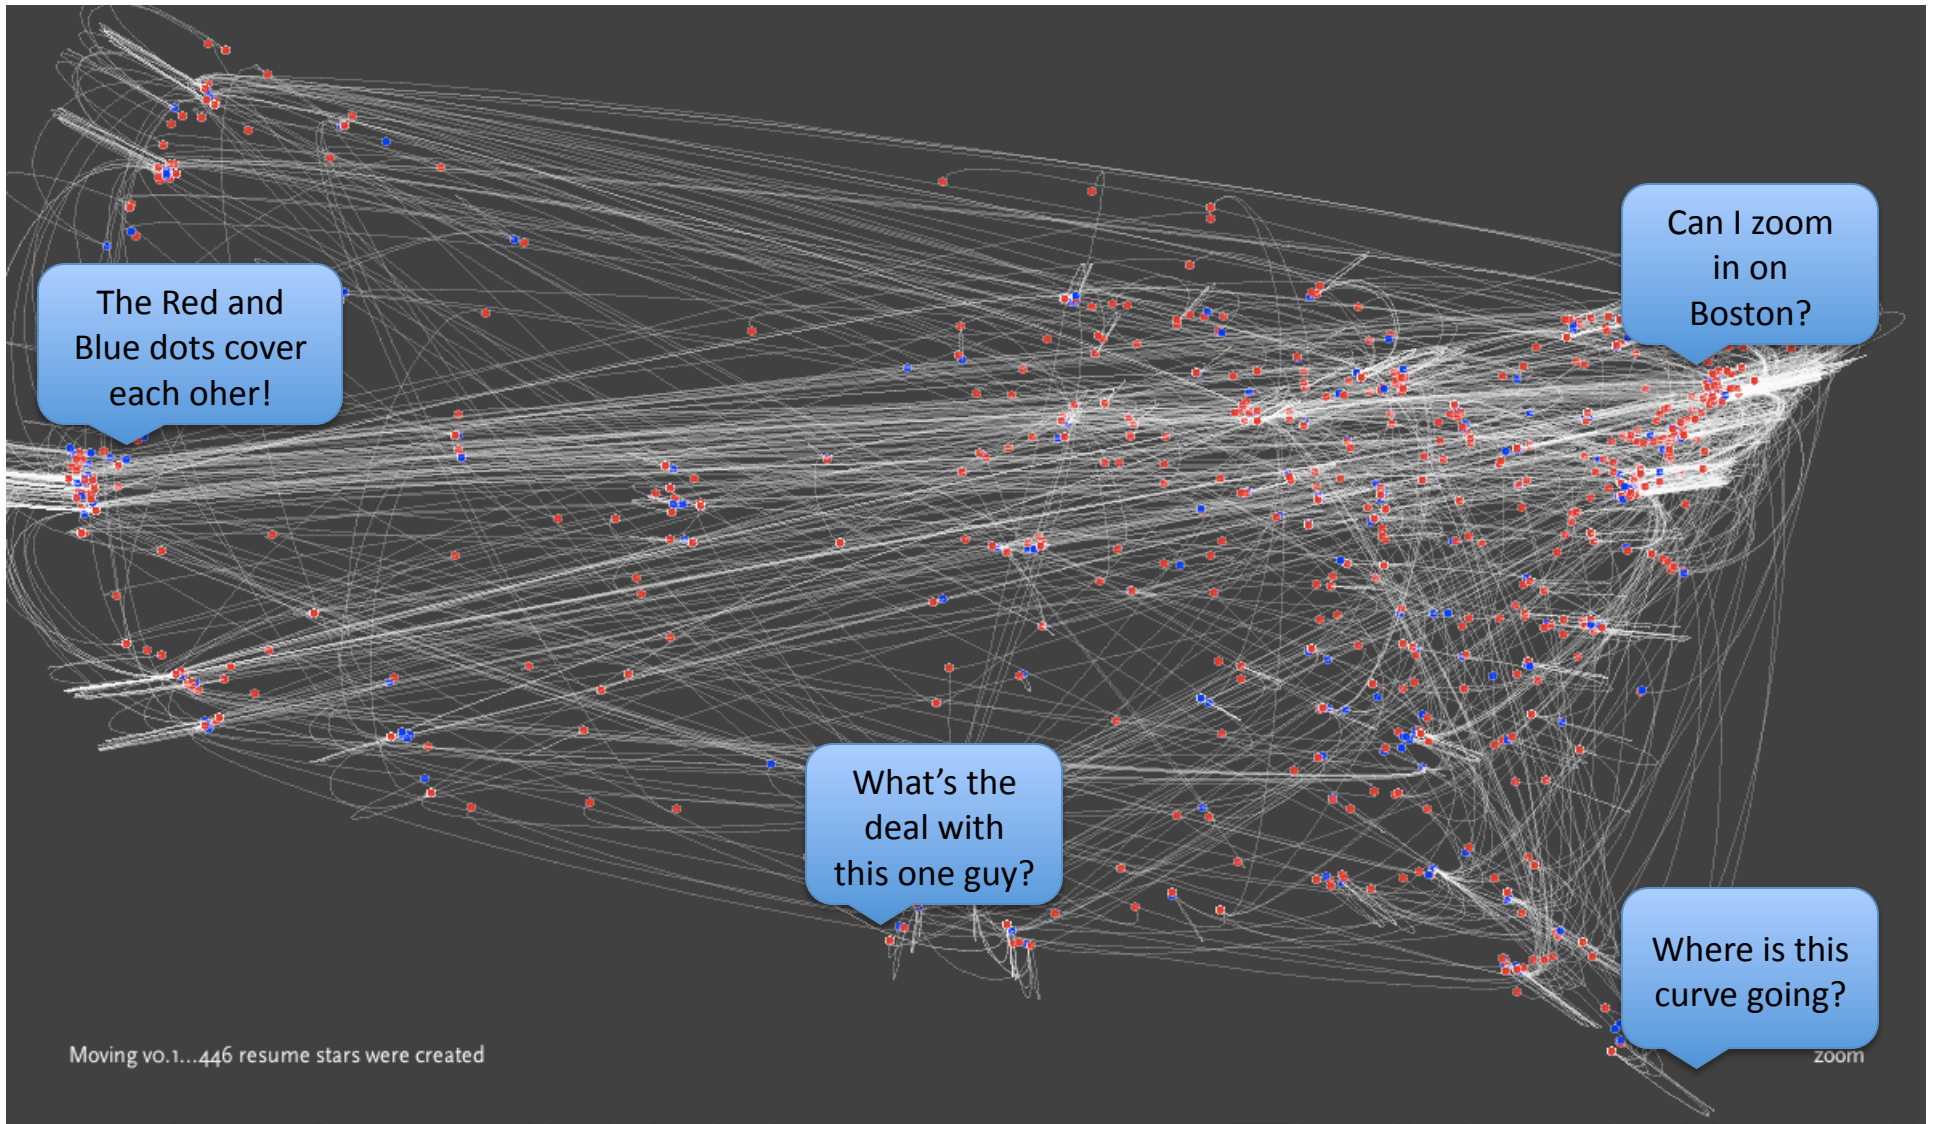

Finding: Other people simply Love New York. (Or Boston, or Philadelphia).

Finding: Few people seem willing to leave Texas, even for work.

Finding: Some people manage to find many new jobs in the same city (especially near big cities, but in smaller ones too).
